

# Potential Linkages Between LEDS and Other Instruments – Ron Benioff, NREL

- Potential Linkages at Country Level
  - Design LEDS and mitigation aspects of TNAs as complementary planning and implementation processes – TNAs may focus more on technology specific measures and LEDS on sectoral measures
  - Feed LEDS sectoral development and climate plans and implementation processes into NAMAs and coordinate implementation with NAMAs
  - Apply LEDS sectoral plans to guide technology roadmaps , while roadmaps provide in-depth technology analysis and RD<sup>3</sup> plans that can inform LEDS
  - Coordinated LEDS capacity building with other instruments/programs
  - Harmonize LEDS, TNA, NAMA, and road map support as part of ***one integrated, country-driven planning and implementation process***

## LEDS Linkages with Other Instruments - 2

- Opportunities for LEDS Harmonization with Other Instruments at Global and Regional Levels
  - Collaboration on data sets, analysis and decision tools, and planning methods and frameworks
  - Cooperative forums for peer to peer sharing of lessons and experiences
  - Coordinated training programs
  - Common efforts to partner with investment and financing programs and other international initiatives
  - Collaborate work to evaluate options for connections with the Climate Technology Center and Networks and other UNFCCC mechanisms
