What LEDS programs/activities are being designed and implemented?

- *Prioritising the development of knowledge generation to measure and predict climate change and, especially extreme weather events, floods, droughts and forest and veld fires, and their impacts on people and the environment.*

- *The use of incentives and disincentives, including through regulation and the use of economic and fiscal measures to promote behaviour change*

- *Mainstreaming of climate change response measures*

Success or challenges in the implementation / lessons learned?

- *Identifying adaptation and mitigation interventions that have potential positive job creation, poverty alleviation and/ or economic impacts*

- *Recognise that measures taken by developed countries in their efforts to respond to climate change may have detrimental effects on Botswana (high carbon and energy intensive economies. These response measures may include trade measures including border tax adjustments, and could be reflected in a reluctance to trade in goods with a high carbon footprint.*

- *Taking a balanced approach to both climate change mitigation and adaptation*

What can AfLP do to promote LEDS

- *Determine bodies and processes to initiate and/or maintain nation-wide climate change monitoring systems (inter alia), on extreme weather events, floods and droughts, disease*

- *Identify processes to implement and comply with the monitoring, reporting and verification (MRV) system.*

- *Establish a register of climate actions that result in the mitigation of greenhouse gases and measure progress against the national reduction targets.*

- *Increasing the understanding of Disaster Risk management:*

- *Climate Change and Insurance – aka Loss and Damage: CC has been identified as a key strategic threat facing the insurance industry.*

Any services or technical support available?

- *Identify forest planning tools that take into account carbon sequestration*

- *Many of our landfill sites are not designed or operated in a way that allows for the optimal extraction of methane for use as a fuel*

- *Identify opportunities for regulating commercial building standards with a view to enforcing green building.*

- *Knowledge, Information and governance*

- *Identify processes for the review of policies, strategies, legislation, regulations and plans*

- *Identify means of monitoring, reporting and evaluating*
